

RecyclerView::ViewHolder

```
classDiagram
    class RecyclerViewViewHolder["RecyclerView::ViewHolder"]
    class ArticleAdapterViewHolder["de.backxtar.clevercharge.data.ArticleAdapter.ViewHolder"]
    ArticleAdapterViewHolder --|> RecyclerViewViewHolder
```

The diagram consists of two class boxes. The top box, representing the superclass, is divided into three horizontal sections: the top section contains the class name 'RecyclerView::ViewHolder', and the two bottom sections are empty. The bottom box, representing the subclass, is also divided into three horizontal sections. The top section contains the fully qualified class name 'de.backxtar.clevercharge.data.ArticleAdapter.ViewHolder'. The middle section is empty. The bottom section contains the constructor signature '+ ViewHolder()'. A blue arrow with an open triangular head points from the top of the subclass box to the bottom of the superclass box, indicating an inheritance relationship.

de.backxtar.clevercharge.data.
ArticleAdapter.ViewHolder

+ ViewHolder()
